Dear Mr. Beckwith:

Re: Disposal of Contaminated Soil from
Amphenol Products, Franklin, Indiana

A request for disposal of the above-referenced waste was submitted to this office on May 3, 1985. The request was started through the usual evaluation process. Meanwhile, Mr. Roy Harbert of this Division discovered that Adams Center Landfill had already accepted and disposed of numerous loads of soil debris from Amphenol Products.

In a conversation between Ms. Jami Thais, Staff Chemist, and Ms. Susan Griggs of Adams Center Landfill, Ms. Griggs stated that Adams Center Landfill and the generator had decided to give the soil a hazardous waste code of F008. This enabled Adams Center Landfill to accept the waste under their generic approval.

This office questions the designation of the waste as an F008 only. Since the material is contaminated soil from a closure cleanup, it seems likely that any of the waste produced by the Company could be present, including F005, F006, F007, and F009 wastes. Not all of these waste categories are covered by the generic approval.

Please send to this office a description of the events leading to the soil contamination and/or any other documentation supporting Adams Center Landfill's contention that the contaminated soil is an F008 waste only. This information must be submitted within fifteen (15) days of your receipt of this letter.

If you have any questions regarding this correspondence, please contact Ms. Jenny Ranck at AC 317/243-5089.

Very truly yours,

David D. Lamm, Director
Division of Land Pollution Control
